NOVA EYES

Nova Eyes is an innovative cosmetic injectable that combats this by refreshing the appearance of the skin around the eyes, reducing wrinkles and fine lines, and contributing to the natural repair of cell damage.

Nova Eyes utilises the safe and effective biotechnology of PN (Polynucleotide), a DNA fragment extracted from salmon. The reason that it is so compatible with human cells is that salmon DNA is a 95% match with the DNA of humans and causes no immune response or lymphedema, making it a great alternative to Botox.

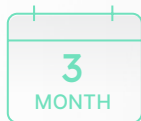

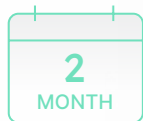

BEFORE

AFTER

Upon injection, the anti-ageing product gets to work by repairing damage to the dermis layer of the skin using polynucleotides, resulting in hydration, rejuvenation, and anti-inflammation. It also promotes the body to use its natural resources by actively stimulating synthesis of collagen – an essential protein for healthy, youthful skin.

HOW MANY TREATMENTS DO I NEED?

TO BEGIN, A COURSE OF THREE TREATMENTS – ONE PER MONTH, IS RECOMMENDED.

Following this, a top-up can be done every six months.

You will start to see results from the first treatment.

WHAT ARE THE KEY INGREDIENTS?

DEOXYRIBONUCLEIC
ACID
250-350 KDA

POLYNUCLEOTIDE
2MG

WHAT BENEFITS CAN I GET FROM USING NOVA EYES?

Reduced dark circles, making you look less tired.

Smoother and more even skin tone and colour.

Repair of damaged cells caused by UV rays, scarring, or acne.

Less fine lines and wrinkles.

Plumper, tighter skin due to increased hydration and elasticity.

Diminished appearance of pigmentation, bruising, and rosacea.

Decreased presence of damaging free radicals.
